

Interactive Design and Prototyping (IDP)

IDP SESSIONS' PURPOSE

- Introduce users to the new system
- Demonstrate how work may be done with the new technology
- Analyze requirements and business processes
- Identify gaps between the new system's core capabilities and the unique needs of the campus

YOUR ROLE

- Become informed and share unique business process that may need to be added to the core capabilities of the system
- Bring forward requests for additional functionality that may now be possible with the new system
- Ask questions and voice concerns about the transition process

NEXT STEPS

- Next steps will include the analysis and design of the system, identifying which gaps will be approved for customizations
- Once solutions are selected the system will be configured to UC Berkeley's needs
- After the system is configured and integrated the team will begin to test and train users on the system
- Once the new system is validated through testing the new product will be deployed for general use
